- Foot and Shoe Odor • Slow Wound Healing • More*

***A Cutting-Edge Treatment
Tool to Combat Recurrence***

- In-office during appointments*
- At-home, for more frequent patient use*

PediFix®
Medical Footcare

What's growing in your shoes?

Shoes are warm, dark and damp – the perfect breeding ground for fungus that infects – and reinfects – your patient's skin and nails. Shoes are a reservoir for fungal spores that can cause recurrence after oral, laser or topical therapies.

The typical shoe is filled with harmful, odor causing microorganisms like these.

Shoe sprays only mask odors. Those few with true germicidal action leave behind a toxic residue that is reconstituted by perspiration, leaving your patient's feet in a poisonous swamp all day. That's not healthy.

Fortunately, UVC light is proven to kill germs in water supplies, on food preparation surfaces, and in hospital air flows -- safely, easily and effectively. SteriShoe® is the first and most advanced product ever designed to use UVC light to kill germs in shoes.

And it does it very well. As proven in a JAPMA published study. It also bears the APMA Seal of Acceptance, so you can be confident in its effectiveness.

For maximum patient benefit, get SteriShoe® into your treatment rooms, so you can 'treat their shoes while you treat their feet' during appointments. Stop watching your patients put on their germ, fungus and bacteria-filled shoes. Recommend SteriShoe® for patient purchase

If you're fighting Athlete's Foot, Onychomycosis, odor, or slow wound healing, don't ignore your patient's shoes. Get SteriShoe® for your practice and your patients today.

*For better outcomes, fight reinfection and recurrence
– use, dispense, recommend SteriShoe®.*

Fits in most Shoes!

3 Easy Steps to Cleaner Shoes

1. Slide SteriShoe sanitizer into each shoe
2. Place in protective bags (included)
3. Press power button
In just 15 minutes your shoes will be rid of bacteria and fungus (and the odor they cause)

Studies show that shoes are contaminated with microorganisms that cause foot infections. The SteriShoe sanitizer is not a medical device and does not treat toenail fungus, athlete's foot, or other foot infections. The SteriShoe sanitizer is for use inside shoes and not on feet. The SteriShoe sanitizer promotes good hygiene and is recommended for use in conjunction with toenail fungus and athlete's foot treatments.

Optional scent pouch for extra odor reduction

One-touch controller

Built-in fan removes moisture and deodorizes

"Footwear disinfection is an important but often neglected consideration in the prevention of recurrent foot infections. Shoe Care Innovations has answered the call for reliable disinfection of footwear with the invention and development of the SteriShoe shoe sanitizer."

Dr. Bryan C. Markinson
Chief, Podiatric Medicine and Surgery

Ultraviolet technology kills bacteria and fungus lurking in your shoes. These harmful microorganisms can cause:

Toenail Fungus

Athlete's Foot

Foot Infections

"I've been using this a few weeks now and I am impressed with the quality and attention to detail that went into designing this. I use this to sanitize and dry my shoes after a long day and I haven't had any issues with odors."

Sergio M.
